Comments

This design was written specifically for dichroic green-red Oregon sunstone. Orienting the best green colour down the Z will color most of the stone green, but orienting it down the X or Y axes should theoretically give remarkable and very unusual colour effects when tilted forward and backwards. Again, colour-mixing can be a significant problem if mis-oriented. Works in materials from sunstone to rutile RI = 1.54 - 2.62) with no changes.
